RoadRailTM

R/C Car Racing System

RoadRail Portable R/C Car Racing System. Using modular RoadDomes and RoadRails, you can create your own closed race course. Each RoadRail is 6 feet long and connects with other RoadRails to create straight-aways. They also connect with 12" diameter RoadDomes to create intersections and curves. You are the R/C car expert, create the course you've always wanted or follow our simple instructions and quickly build one of our many standard tracks. Change your course every time you race or leave it the same – it's your choice! Lightweight, portable, professional looking, and they fit in most vehicles for transport. RoadRails and RoadDomes grip outdoor surfaces and indoor carpet. They maintain their position without sliding or tipping over. Your time is spent racing, not setting the course! Both the RoadDomes and the RoadRails are weather proof, extremely durable and even resist damage from full scale cars!

WARNING: THIS PRODUCT IS NOT INTENDED TO BE USED AS A SAFETY BARRIER.

System Features

Industrial strength metal fasteners resist impact and assemble quickly

RoadRails over-lap for high strength straight-aways

High impact strength plastic with UV protective additive to resist sunlight

Both RoadDomes and RoadRails stack for easy storage

Super grip on underside of RoadDome and RoadRail

RoadRails connect at varying angles and stay secured

5' over-lapped length

6' long RoadRail
